

## Congratulations!

You have selected the world's finest shower door or tub enclosure. Since inventing the frameless shower door in the 1950's, Agalite has been known for its unequivocal quality. Agalite doors are made of tempered glass, durable hardware and the finest brass, stainless steel and aluminum in heavy gauges to ensure a lifetime of virtually trouble-free, worry-free use. We have over four million doors worth of experience. This gives us the confidence to say that you will enjoy your Agalite shower/tub enclosure for many years. Here are a few tips to help you care for and clean your Agalite shower door or tub enclosure to keep it looking new. Agalite, Built to Last a Lifetime!

## Care & Cleaning

### Glass Care

Agalite provides the following information for proper cleaning and care of your enclosure. Squeegeeing the glass frequently, then drying with a soft cloth is highly recommended. Using a squeegee after each shower helps keep spots and scale from accumulating on glass components. We also follow the recommendation of the Bath Enclosures Manufacturing Association (BEMA). You should avoid abrasives, bleach, acidic or vinegar based cleaners and scrubbing pads. Read labels on cleaning products thoroughly before using. If your glass is coated or treated with surface protectants, follow the instruction on the labels attached to the glass.

### Aluminum, Brass and Stainless Steel Components

- Silver, Gold, Brushed Nickel, Satin Silver and some Oil Rubbed Bronze/Dark Bronze -

Most of the silver, gold, brushed nickel or satin silver metal components of your shower door are anodized aluminum or electroplated brass or stainless steel. Aluminum is a lightweight, non-rusting metal which is anodized to give color and to make shiny. Anodizing also seals the aluminum to guard against corrosion and pitting. Electroplating is a process similar to anodizing. Some glass and lime scale cleaners can damage anodizing and electroplating, causing pitting or discoloration. You can permanently damage the metal's finish if improper cleaning compounds containing alkaline and phosphoric acids are used. The result can be the appearance of white spots and discoloration. Many products' labels warn against use on anodized and plated metals. Read labels on cleaning products thoroughly before using on your shower door. Drywall, spackle and tile grout, which contain lime, can also spot metal and glass surfaces.

### "Powder-coated" Metal Finishes

- Oil Rubbed Bronze, White, Black, etc. -

If your unit is not an anodized/electroplated colors listed above, it is probably painted via a "powder coat" process. The powder-coat surface is very durable, but it can scratch or chip. If a scratch occurs, please seal it with a matching paint from your local paint or big box store or clear fingernail polish. Guidance for cleaning powder-coated metal is the same as anodized/electroplated metal.

## A Note Concerning Tempered Glass

To conform to building codes, shower doors must use tempered glass. Building codes specify tempered glass due to its safety properties. Tempered glass is four to six times stronger than untempered (or annealed) glass. In the rare event of breakage, however, the tempering process causes the glass to break into smaller, lighter, less jagged pieces. Due to these benefits, automobile side and rear windows and many household windows and doors utilize tempered glass.

The edges of tempered glass are the most vulnerable area that cause breakage. For this reason, ensure that when the door is swinging or sliding that it does not hit something hard or sharp, such as, a toilet, towel rack, sink, or any moveable hard objects, etc. Also ensure the glass door does not swing or slide into unprotected metal components of the shower door itself. If the door hits another unprotected part, it may indicate shifting or settling of the house, an improper installation, or any other situation that requires attention. Call your Agalite dealer or the company who installed the door immediately to have the problem corrected. In the event of breakage, contact your dealer for replacement and refer to the *Lifetime Warranty* included in this packet.

## A Note Concerning Water Protection

There is a saying in the industry, 'a shower door is not an aquarium'. Further, different models of shower doors provide different levels of water protection and proper installation plays a large roll in achieving proper functioning. While Agalite engineers its products to provide a high level of water protection and offers accessories to enhance protection for smaller enclosures or high water pressure/volume situations, there is always a possibility of water dripping onto the floor. Besides providing anti-slip protection, bath mats are a common solution if minor issues exist.

## Your Warranty and Online Registration

Included in this *Agalite Owner's Manual* packet is your *Lifetime Warranty* and instructions on how to register your unit's warranty online. To activate your warranty, please complete the online registration within 30 days of the installation of the enclosure or purchase of your new residence

Agalite takes great pride in providing the world's finest shower and tub enclosures. We are always striving to improve. Please notice that there is a "Comment" section in the *Online Registration*. Take a moment to write any compliments, general comments, or criticisms you may have concerning our products. Your comments will be greatly appreciated

Our goal is for you to thoroughly enjoy your Agalite shower door or tub enclosure for many years of worry-free use.
